

Region Name	Region Code	AZ Count	Key Services	Notes.
US EAST(N.Virginia)	us-east-1	6	AWS Services by Region	Located in the United States, enabled by default
US EAST(OHIO)	us-west-1	3	AWS Services by Region	Located in the United States, enabled by default
US WEST (OREGON)	us-west-2	4	AWS Services by Region	Located in the United States
AFRICA (Capetown)	af-south-a	3	AWS Services by Region	Located in South Africa, disabled by default
ASIA PACIFIC (Hong Kong)	ap-east-1	3	AWS Services by Region	Located in Hong Kong, disabled by default
ASIA PACIFIC (Hyderabad)	ap-south-2	3	AWS Services by Region	Located in India, disabled by default
EUROPE(Ireland)	eu-west-1	3	AWS Services by Region	Located in Ireland, enabled by default
EUROPE(London)	eu-west-2	3	AWS Services by Region	Located in the United Kingdom, enabled by default

More details about the available regions and the availability zones can found at [AWS Regions - AWS Regions and Availability Zones](#)

Facts to remember

- To use a region enabled after March 20, 2019, it needs to be enabled in the AWS console region section before resources can be assigned to them
- Consider what region suits your needs best in terms of the workload you are deploying and the users you are deploying it for
- Before choosing any region, check for the cost, latency, compliance implications, and service availability implications

Common exam traps

Single availability zones - deploying an multi-tier application to a single availability zone can lead to a single point of failure, deploy using at least two AZs

Lack of understanding of the design principles of REGIONS and AZs

An edge location differs from an AZ

Common Nigerian problem

Jamiu builds a video multiplayer gaming platform for African gamers. He deploys her application in the af-south-1 Cape Town Region across two Availability Zones —AZ-1 (af-south-1a) and AZ-2 (af-south-1b). If an electrical transformer failure takes down AZ-1, his load balancer immediately routes all traffic to AZ-2 —zero downtime for users. He also enables CloudFront distribution for her video files, so a viewer in Kano loads video from the nearest Edge Location rather than Cape Town
